

What to do if you think you are infected

If any of the following symptoms apply, contact the “Returnee and High Risk Contact Consultation Center” immediately. (Consultations are also possible even if the following do not apply)

- If you have difficulty breathing, heavy fatigue, or high fever
- If you are a senior citizen, have underlying conditions, or are pregnant and are experiencing a fever, a cough, or other relatively light cold-like symptoms
- Except the above cases, if you are experiencing a fever, a cough, or other relatively light cold-like symptoms for an extended period of time. (Please contact the center if the symptoms last 4 days or more. Symptoms vary according to the individual. If you show strong symptoms, please contact the center immediately.)

Preventing Infections

Preventing Infections

Wash your hands thoroughly

Eat balanced meals

Get lots of sleep

Wear a mask as often as you can

Avoid crowds

Cough in your sleeve

For those experiencing a fever or cold-like symptoms, please do the following before consulting or seeing a doctor

- Do not go to work or school and avoid going outside.
- Record your body temperature every day.

※ For those who have underlying conditions and the symptoms change, or for those who are worried about diseases other than COVID-19, please call your family doctor first.

Returnee and High Risk Contact Consultation Center

The Returnee and High Risk Contact Consultation Center will ask questions like these.

- ① Since when have you had a fever or a cough?
- ② Have you been to a doctor since you have had these symptoms?
- ③ Have you been abroad or to another prefecture recently? (Where?)
- ④ Does anyone around you have a cold or a cough?
- ⑤ Has there been anyone around you infected with the new coronavirus?
- ⑥ What are you worried about?
